

File structure (Only important for customization)

- content/
 - pages/
 - about.md
 - new-page.md
 - footer.json
 - home.json
 - langs.json
 - menu.json
 - Metatag.json

How to create a new page?

Only go to the “**content/page**” folder and create a slug-page.md with your content. This file accepts markdown and html syntax.

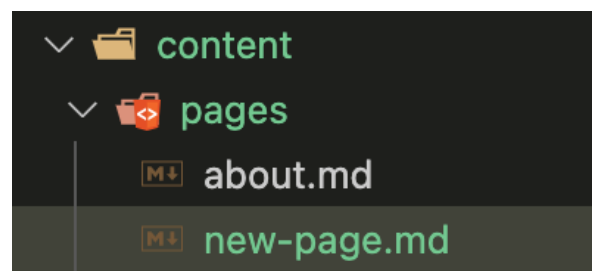

The name file is the slug for your new page.

For more information go to <https://content.nuxtjs.org/writing>

How can I add a page link into my header?

Edit “**content/menu.json**” file and add all your pages that you need, use the next structure

```
{
  "preview": {
    "en": "Preview",
    "es": "Previsualizar"
  },
  "pages": {
    "about": {
      "en": "About us",
      "es": "Acerca de"
    },
    "new-page": {
      "en": "Example new page",
      "es": "Ejemplo de una nueva página"
    }
  }
}
```

How can I add more links into my folder menu?

Edit the “**content/footer.json**” file and add all links that you need. The file includes an example code for your guide.

How can I add more languages?

Edit the “**content/langs.json**” file and add all languages into the array object. Remember to add the new code in all json files. Example:

Have you included a new language **Italian**

```
1  {
2    "langs": [
3      {
4        "label": "Spanish",
5        "code": "es"
6      },
7      {
8        "label": "English",
9        "code": "en"
10     },
11     {
12       "label": "Italian",
13       "code": "it"
14     }
15   ]
16 }
```

Now you can use code it into all json file for the new language

How to start the project?

- Install dependencies: **npm i**
- Run in dev mode: **npm run dev**

Production:

- Run build: **npm run build**
- Start project: **npm run start**

Deploy project using PM2 or another service
